SECURITY WEEK

Adobe Patches 87 Vulnerabilities in Acrobat Software

By Eduard Kovacs on December 11, 2018

Share G+ Tweet Recommend 0 RSS

The December 2018 Patch Tuesday updates released by Adobe address a total of 87 vulnerabilities affecting the company's Acrobat software.

The vulnerabilities impact the Windows and macOS versions of Acrobat and Acrobat Reader DC (Continuous and Classic 2015 tracks), and Acrobat and Acrobat Reader 2017 products.

The list of security holes includes various types of critical bugs that can lead to arbitrary code execution, including buffer errors, untrusted pointer dereference, use-after-free, and heap overflow. The critical flaws also include several security bypass issues that can lead to privilege escalation.

When Will It Be Safe to Use Adobe Reader?

Adobe released Acrobat Reader 1.0 on June 15, 1993 — 25 years ago

They have issued over 3,500 “critical” and “security” updates to the free software since then

It is, in my opinion, the #1 vulnerability vector for Macs (to say nothing of PCs)

And you don’t need it for anything on a Mac. Apple’s built-in Preview runs circles around Adobe Reader, without any of the vulnerabilities

Uh-uh.
Not on our watch, Adobe.
