**Summary.** Studies show that most people understand that there are serious risks associated with using public, unsecured Wi-Fi networks — and yet, an overwhelming majority of Americans use these networks anyway. While using free public Wi-Fi can be convenient,... [more](#)

## How to Avoid Public WiFi Security Risks

Wi-Fi users are at risk from hackers, but fortunately there are safeguards against them. The recent explosion of free, public Wi-Fi has been an enormous boon for working professionals. Since these free access points are available at restaurants, hotels, airports, bookstores, and even random retail outlets, you are rarely more than a short trip away from access to your network, and your work. This freedom comes at a price, though, and few truly understand the public Wi-Fi risks associated with these connections. Learning how to protect yourself will ensure your important business data remains safe.

# How To Safely Use Public Wi-Fi Networks

Share this page

Wi-Fi hotspots in coffee shops, libraries, airports, hotels, universities, and other public places are convenient, but often they're not secure. If you connect to a Wi-Fi network and send information through websites or mobile apps, someone else might be able to see it. Here are some ways to safely use public Wi-Fi when you're out and about.

Did you know that Congress just passed a law that allows your Internet service provider (ISP) to sell your personal data? Your ISP can see what you do while you're spending time online. From making purchases to looking up medical conditions, or arranging vacations and shopping online, your actions create a digital trail of data that can paint a very detailed picture of you.

BREAKING NEWS

ISPs see a myriad of activity-based information about you, such as searches you perform, websites you visit, articles you read, your emails, instant messages, any files that you download, and more. In addition to viewing that data, Internet service providers can also collect it, and even sell it to a third party for profit.

How to protect your online privacy with a VPN

+

### Use HTTPS when browsing online

In addition to using a VPN to protect your online activity, always make sure you are visiting secure websites. HTTPS browsing adds an extra layer of security using encryption within the browser.

### Enable private browsing

Private browsing is a mode you can use in most browsers that blocks the standard data collecting features built into most browsers. This includes things like cookies, search history, and stored account log in credentials.

The Norton WiFi Privacy VPN helps hide all of your online information, including your location, when you access the Internet. When you use Norton WiFi Privacy, your data is encrypted so that your Internet service provider can see only the amount of traffic passing through their servers and not the encrypted data.

## Norton WiFi Privacy

**Secure private information like your passwords, bank details and credit card numbers when using public Wi-Fi on your PC, Mac or mobile device.**

- Protects the data you send and receive when using public Wi-Fi
- Adds bank-grade encryption to protect you on public Wi-Fi hotspots
- Lets you browse the Web anonymously so your privacy is protected
- Allows access to your favorite apps and content anywhere you go, as if you were at home
- Encrypts your data with a no-log virtual private network that doesn't track or store your activity
- Provides a 60-day money-back guarantee\*
- Offers world-class customer support from Norton, the leader in online security

## Unencrypted Networks

☐ Hide details

Encryption is the process in which messages are sent between a computer and a wireless router in the form of a "secret code". These messages become unreadable unless the code is deciphered with the right key. Most routers are shipped from the factory with encryption turned off by default, and it must be turned on when the network is set up.

If an IT professional sets up the network, then chances are good that encryption has been enabled. However, there is no surefire way to tell if this has happened.

All current-day routers enforce strong security protocols during the set-up wizard — by federal regulation, since 2008!

Hold down the Option key on your Mac while clicking on the Wi-Fi menubar icon to reveal a whole load of useful info about your Wi-Fi connection.

# Look for the lock!

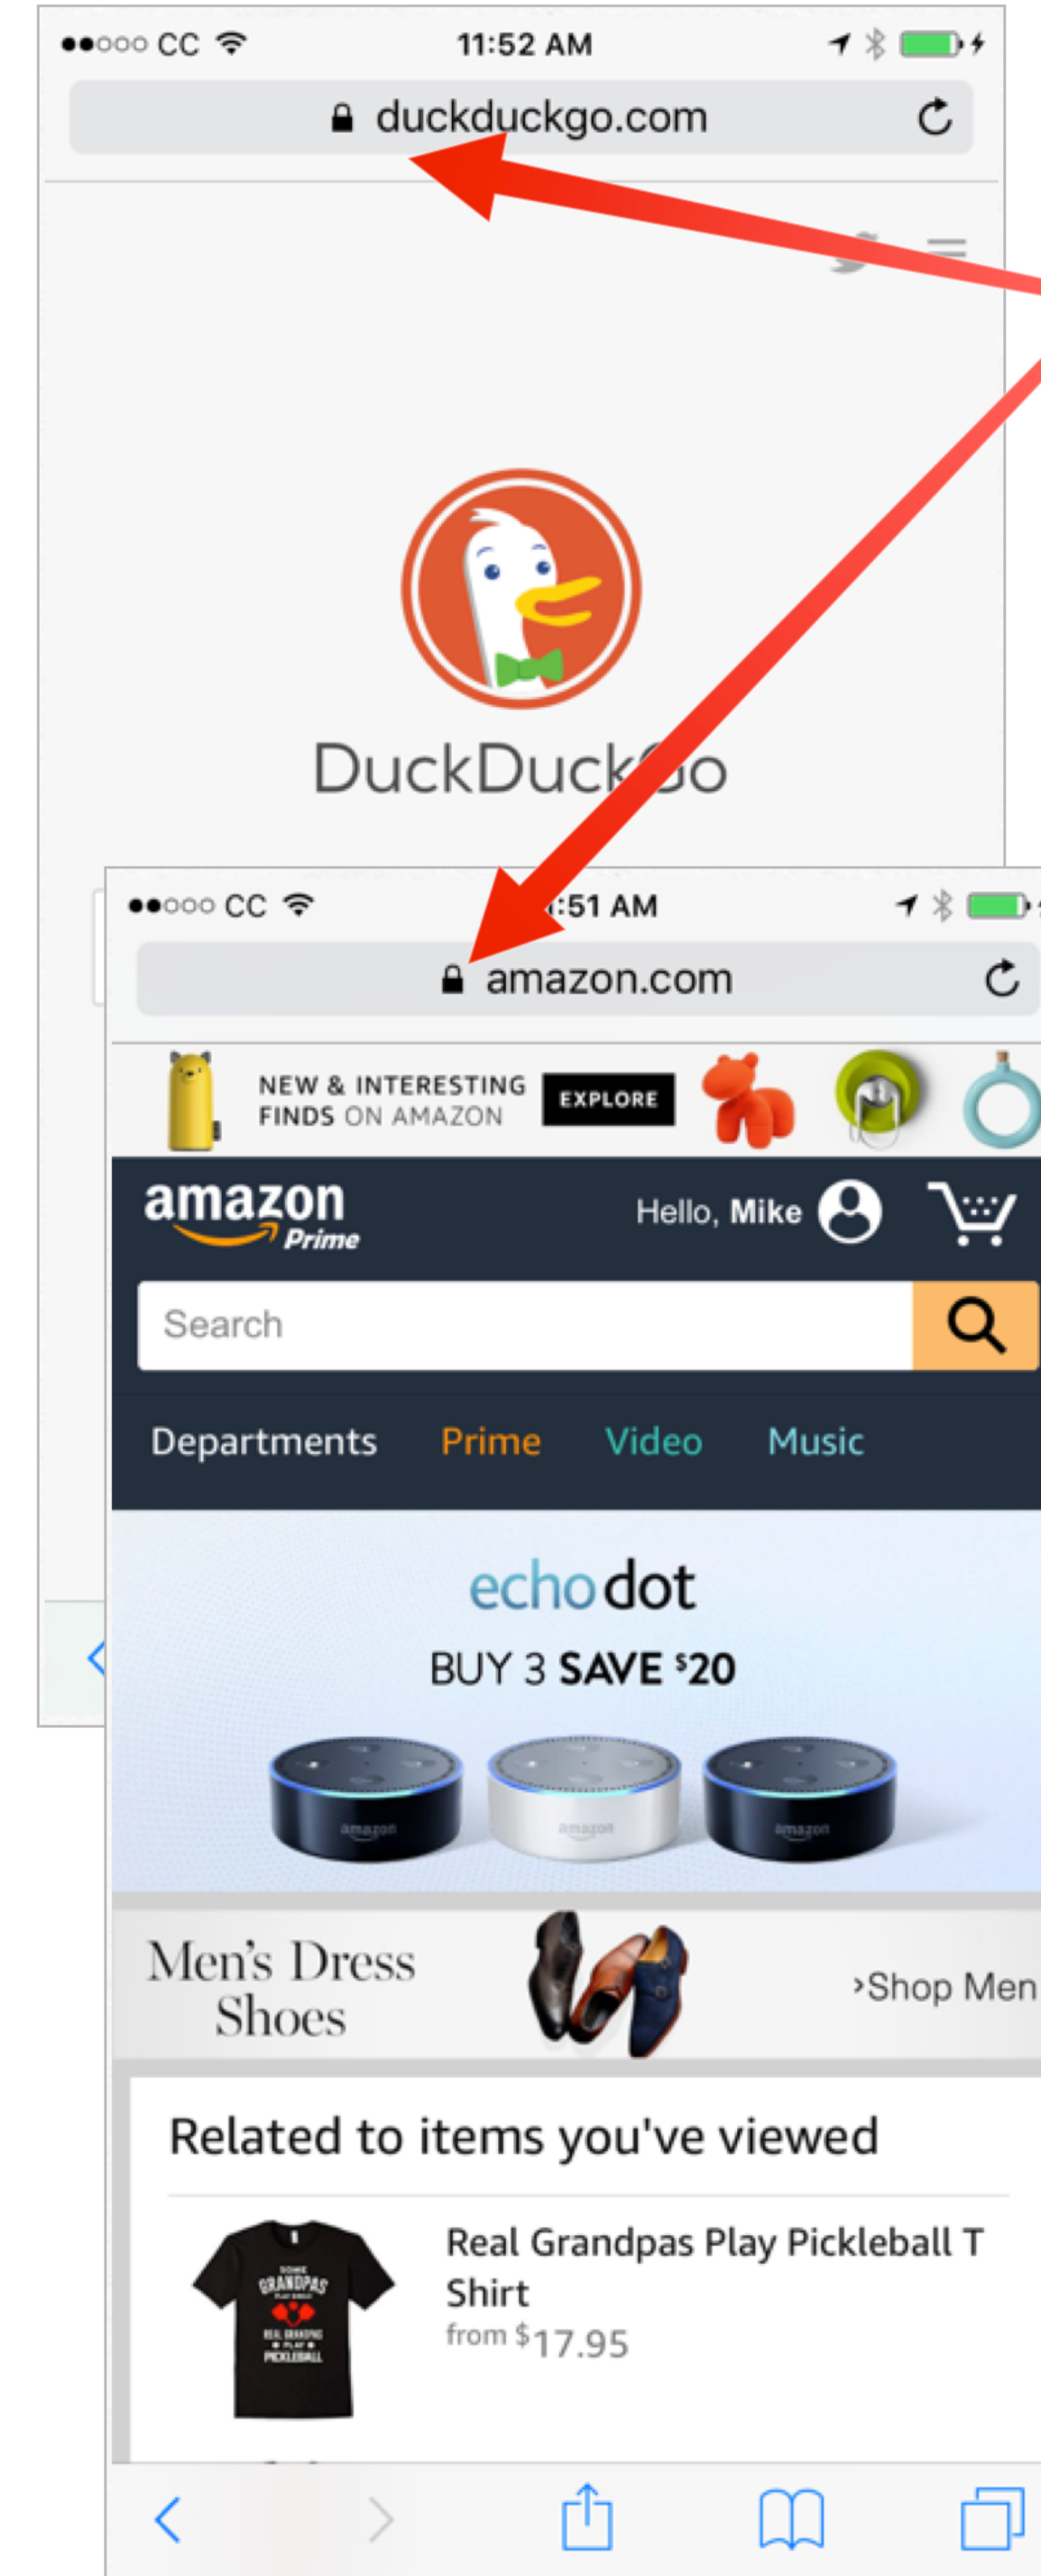

**A LOCK ICON** next to a **Wi-Fi** network name indicates it is an encrypted, secure connection. You will need to enter a password to connect to this kind of network. Once connected, **ALL** traffic between your phone and the internet is encrypted and protected from eavesdropping, interference or tampering.

**If a Wi-Fi network does not** have a lock icon next to its name, it is running in unencrypted, unsecured mode. Traffic sent across that connection **MAY** be susceptible to eavesdropping, interference or tampering. You may still be required to enter a username and password on a login screen, for example, at a hotel, but that does not mean the **Wi-Fi** connection itself is encrypted.

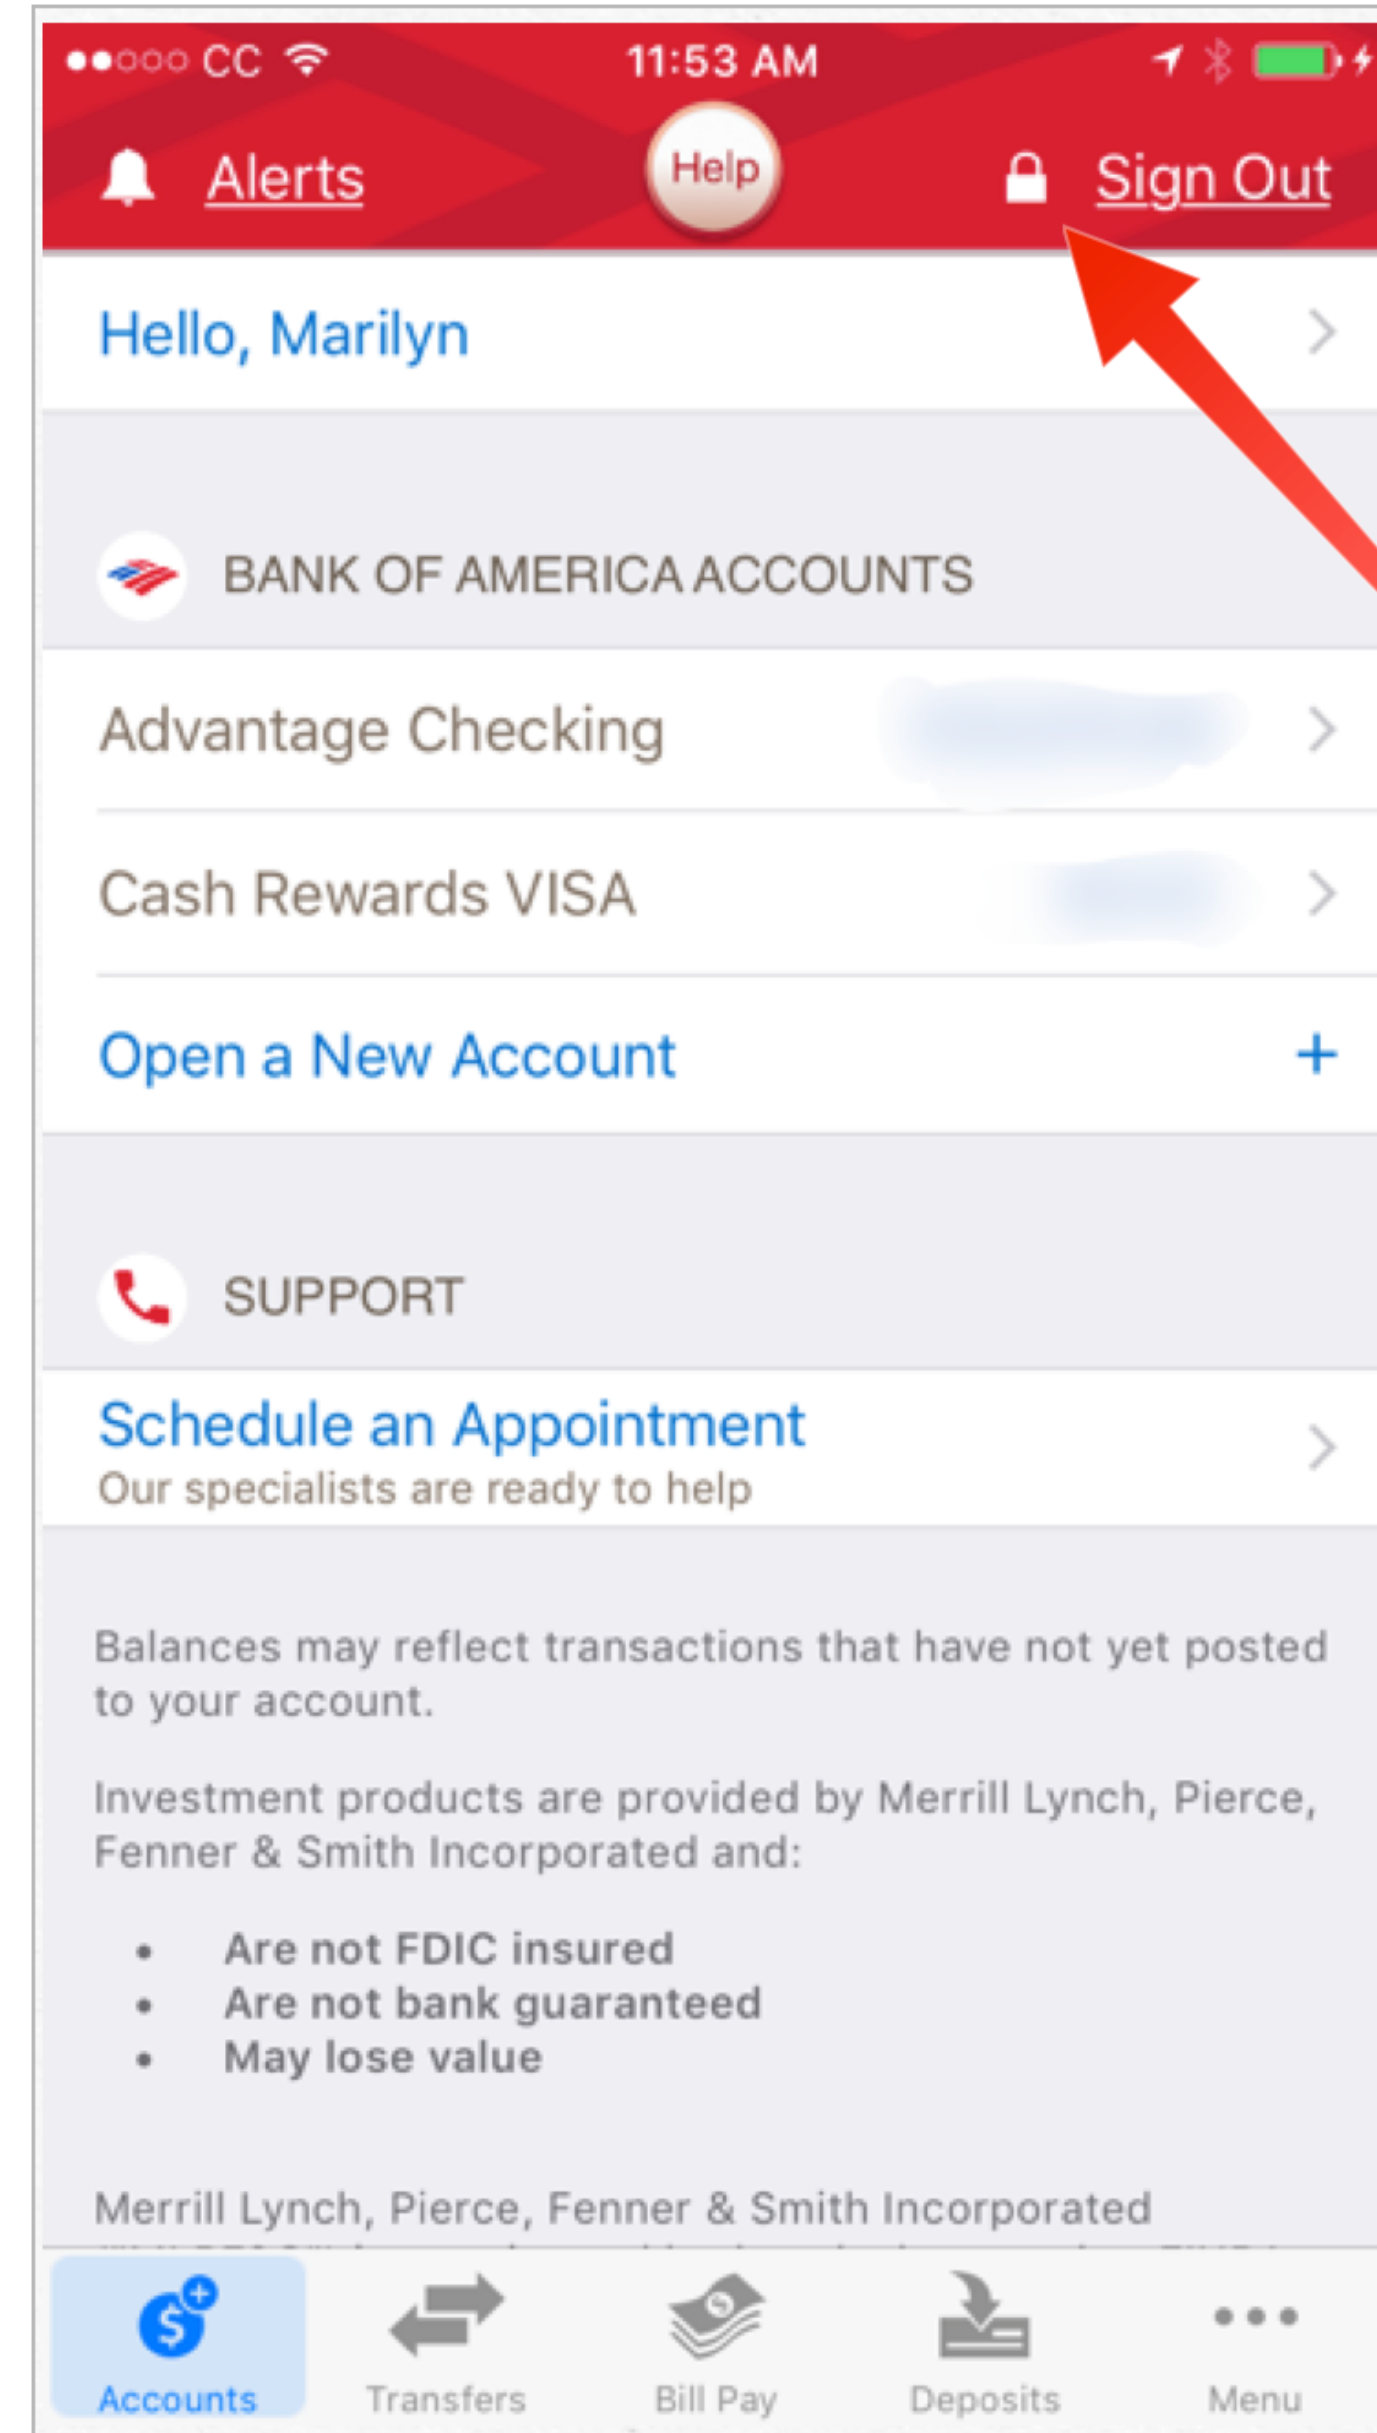

# Look for the lock!

In Safari, a **LOCK ICON** in the address bar indicates that the site you are visiting is encrypting **ALL** traffic between your device and their site, **REGARDLESS** of whether you are using an encrypted Wi-Fi connection.

Almost **ALL** large, reputable sites now encrypt **ALL** traffic by default, so you can be sure that what you are seeing on your device is what they meant for you to see. Encrypting the traffic between your device and their servers insures that your session with that site is protected from eavesdropping, interference or tampering.

# Look for the lock!

**ALL iOS apps that involve finance, health, ecommerce, shipping, money transfer, insurance and many more are REQUIRED by Apple to encrypt ALL traffic between their app and their servers.**

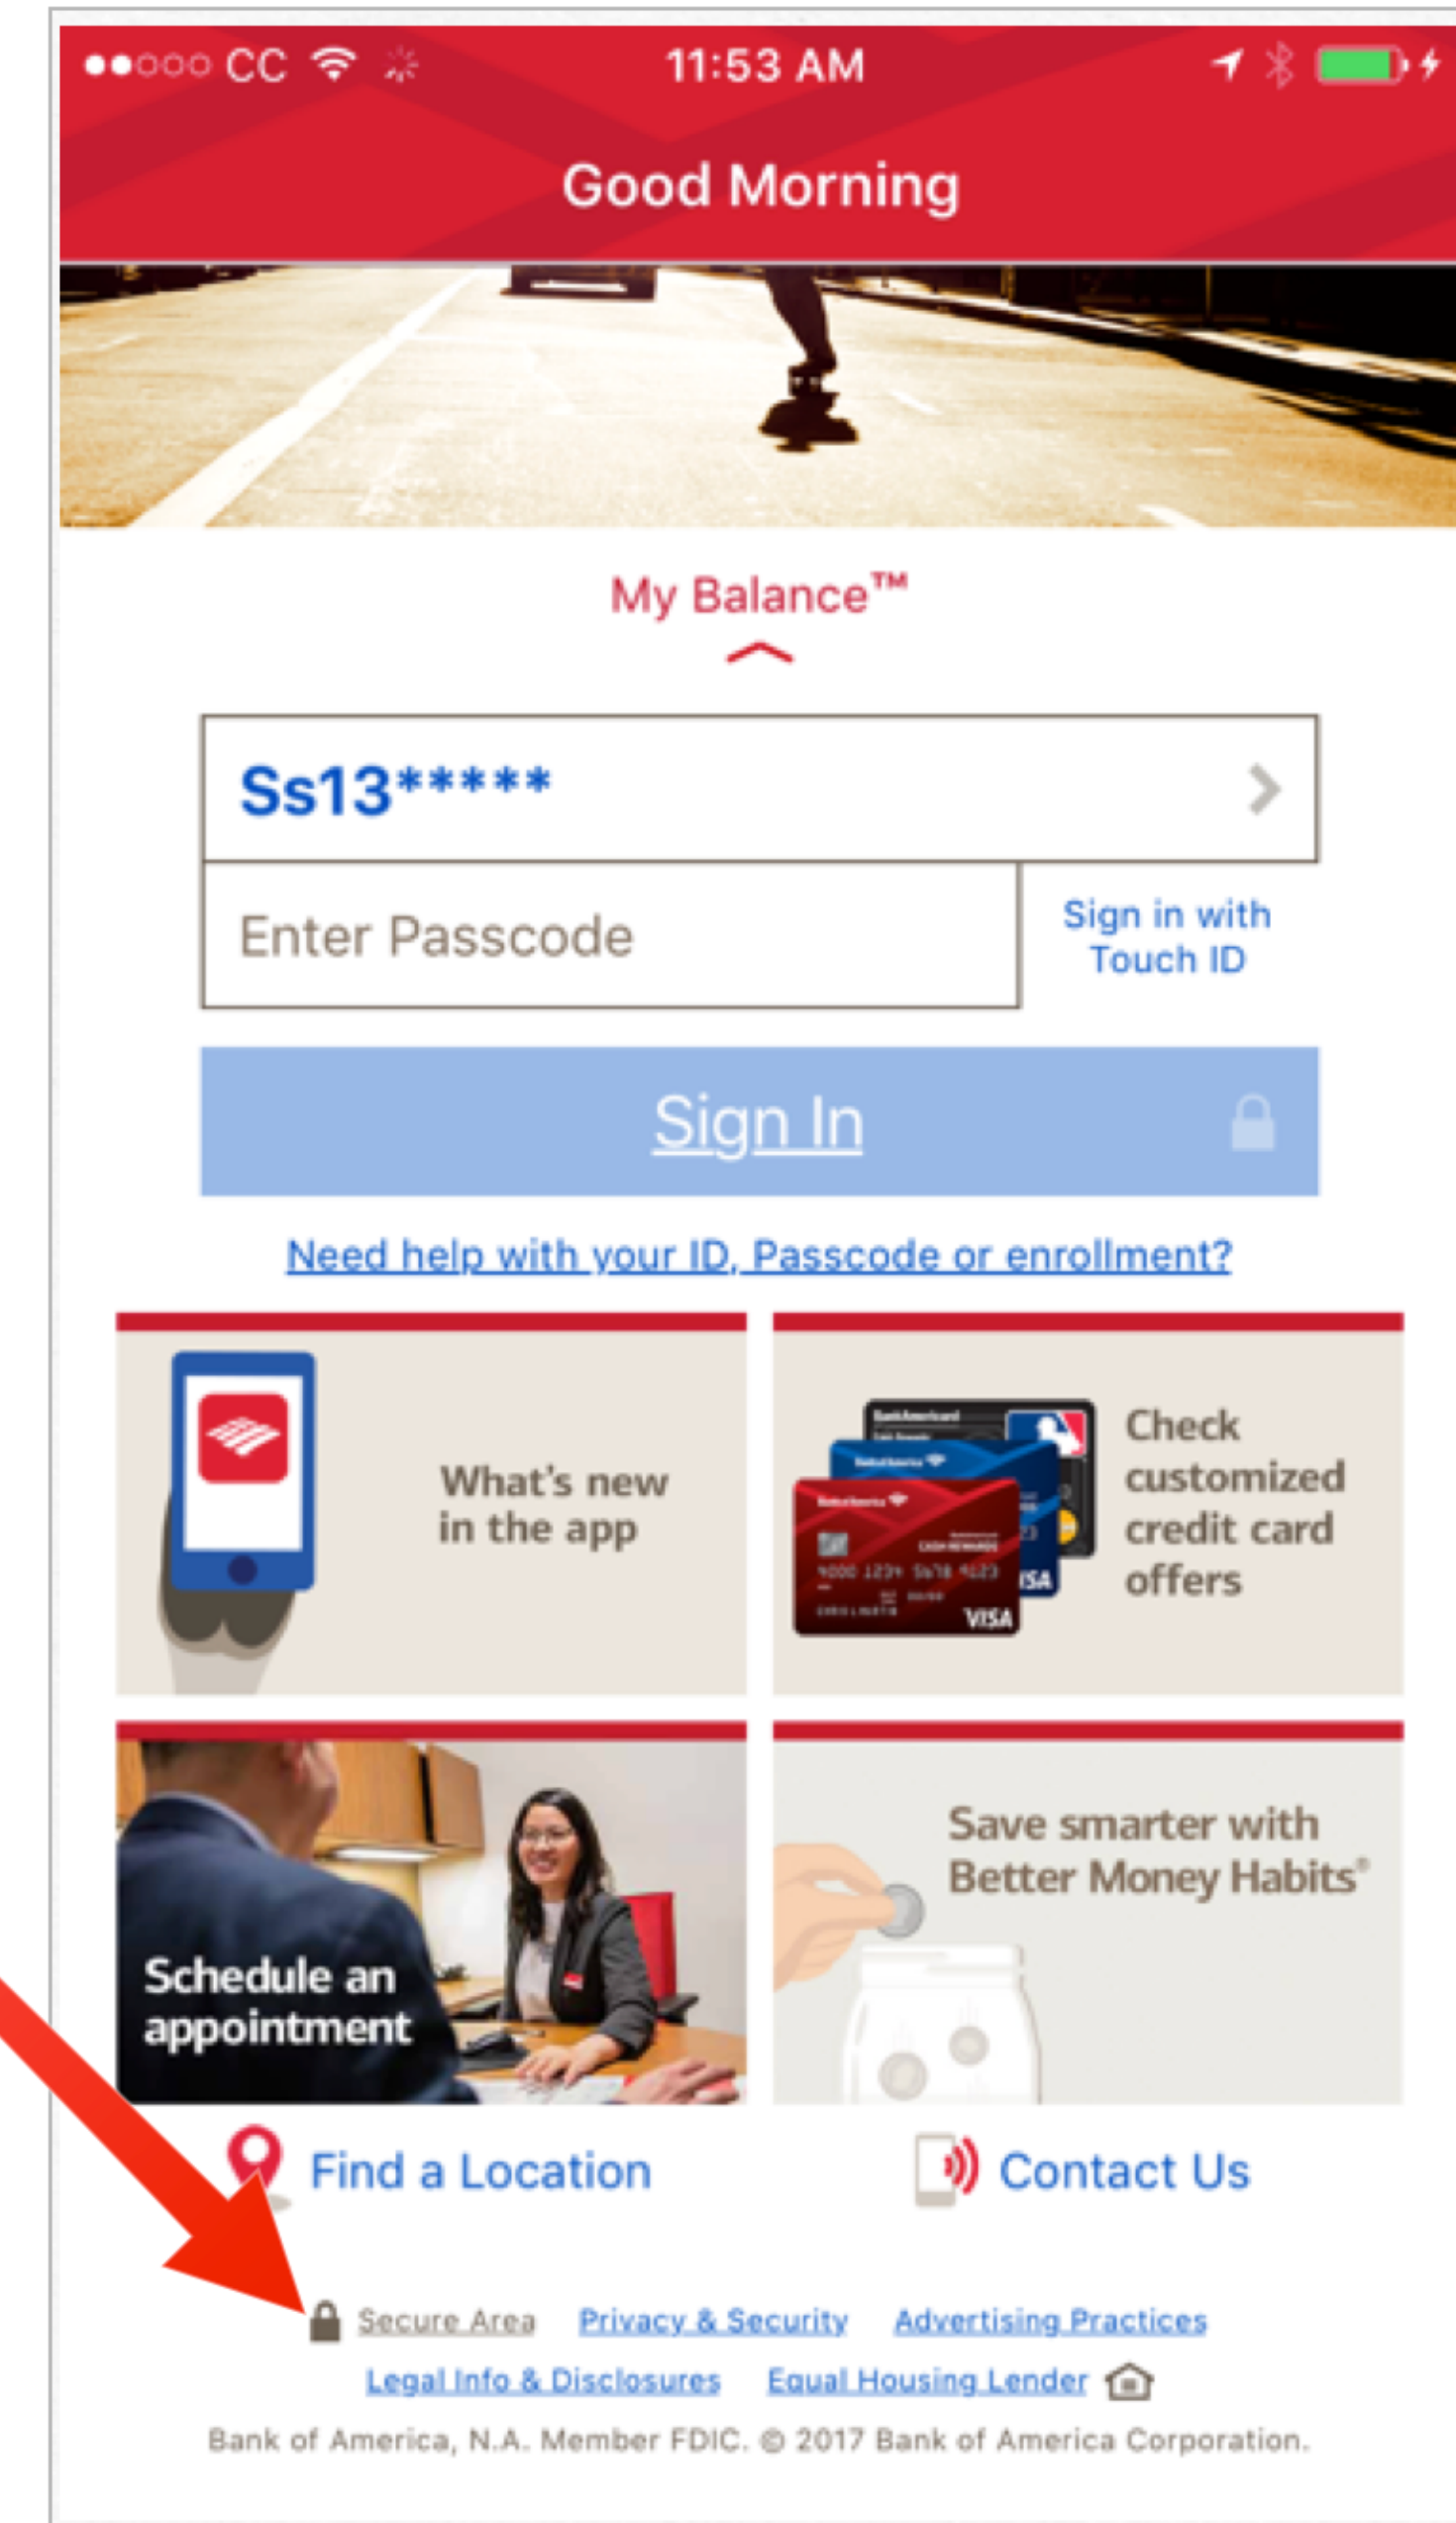

**This means that even if you are connecting to the internet via an unencrypted Wi-Fi signal, ALL the data passing between the app on your device and their systems is encrypted and secure.**

# Look for the lock!

**All reputable companies encrypt ALL traffic between their apps and their servers, EVEN IF you have not yet logged in.**

**This means that even if you are connecting to the internet via an unencrypted Wi-Fi signal, ALL the data passing between the app on your device and their systems is encrypted and secure, even WITHOUT logging in.**

Your \$3/month donation (about the price of a beer during Happy Hour at Cheeks!) to the Club keeps things simple, and helps support the Club strong. <small>Consider chipping in more if you can, but</small>	\$60/year! Wow! Your \$5/month donation to the Club -- about as much as a coffee and a donut each month -- shows you have a big, big heart for all things Cove Apple Club!	<b>Are you serious?! Whooooo!</b> Your \$10/month donation to the Club REALLY shows you have a big love for the Cove Apple Club, and that you want to keep it strong, fun and hassle-free!

# New: Patreon Monthly Donations

- Sign up to donate securely every month in amounts as low as \$3/month
- Automatic donations every month, cancel any time

The image shows a Patreon page for 'Cove Apple Club'. At the top left is a large blue circular logo with a white Apple silhouette. To its right is the text 'Cove Apple Club' in a large, black, sans-serif font. Below this is a smaller version of the blue circular logo. Underneath the logo is the text 'Cove Apple Club' in a smaller font, followed by the tagline 'is creating knowledge, friends & fun at Cypress Cove'. Below this is the heading 'Select a membership level'. There are three membership tiers, each in a white box with a blue border. The first tier is 'Cove Apple Club Member' for \$3 per month, with a description: 'Your \$3/month donation (about the price of a beer during Happy Hour at Cheeks!) to the Club keeps things simple, and helps support the Club strong.' The second tier is 'Cove Apple Club Patron' for \$5 per month, with a description: '\$60/year! Wow! Your \$5/month donation to the Club -- about as much as a coffee and a donut each month -- shows you have a big, big heart for all things Cove Apple Club!'. The third tier is 'VIP Mega-Patron' for \$10 per month, with a description: 'Are you serious?! Whooooo! Your \$10/month donation to the Club REALLY shows you have a big love for the Cove Apple Club, and that you want to keep it strong, fun and hassle-free!'. Each tier has a blue 'Join' button.

Today 10:55 AM

You've been added as a legacy contact

**View Details**

John, I've added you as my legacy contact. This means that you will have access to the data in my account after my death. I'm sharing an access key with you that will be automatically saved in your Account Settings. You can use this key to access my iCloud data after I'm gone.

iMessage
