All of the big leaps in computing came about because of a new UI

- Hardwired → plugboard
- Punched card → CRT
- Batched → Online
- Time-shared → Personal
- Monochrome → Color
- Command-line → GUI
- Cursor matrix → Clickwheel
- Hardware keyboard → Touchscreen
- Mixed reality → Spatial Computing

Steve Jobs: What We Believe

Apple press event at The Garage, One Infinite Loop, 1997

Apple's place in the world...

- Apple has had an influence on technology wildly disproportionate to the company's (former) size
- ~~Many~~ most Apple innovations & technology adoptions have become industry standards (Wi-Fi, USB, CD-ROM, FireWire, MP3, mouse, GUI, touchscreen, etc.)
- ~~Many~~ most of Apple's major products have changed the world

Stolen Device Protection in iOS 17.3

Stolen Device Protection in iOS 17.3

- If a bad guy / thief gets hold of your iPhone **and** knows your unlock passcode, you could be in a world of hurt
 - They can change your Apple ID password
 - They can turn off Find My
 - They can wipe & resell your iPhone
 - Access your stored passwords in iCloud Keychain
 - Enable Recovery Key, locking you out of your Apple account **forever**
 - ...and more

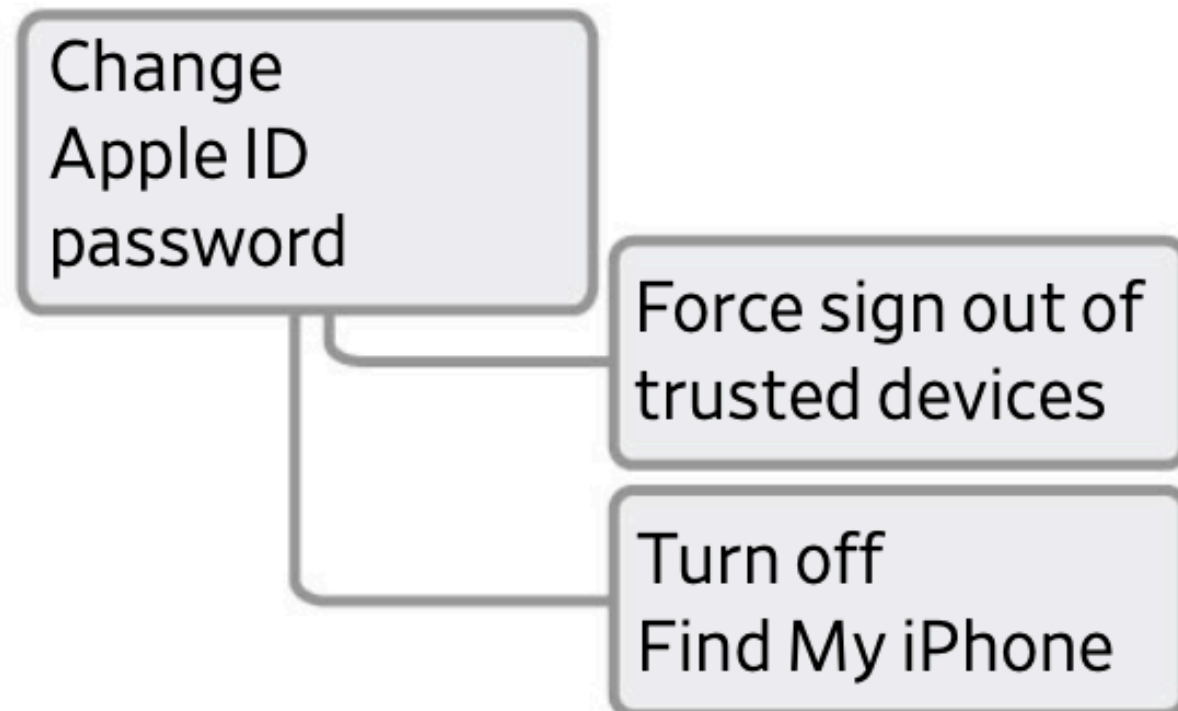

Anatomy of the attack

The thief watches you type your passcode, then steals your iPhone. With both device and passcode, the thief can...

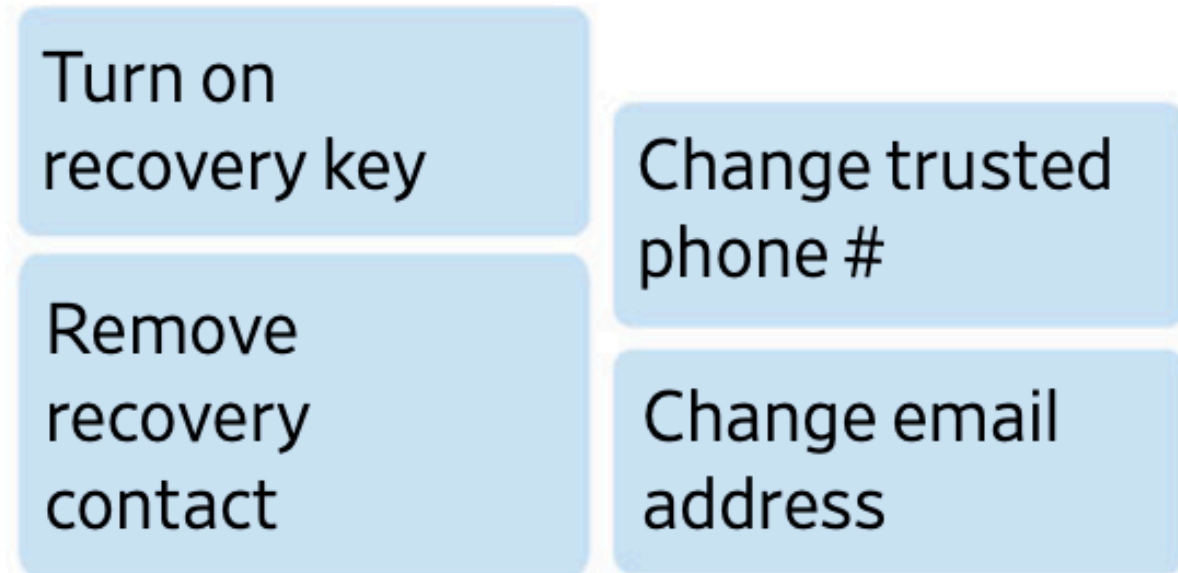

Your Device

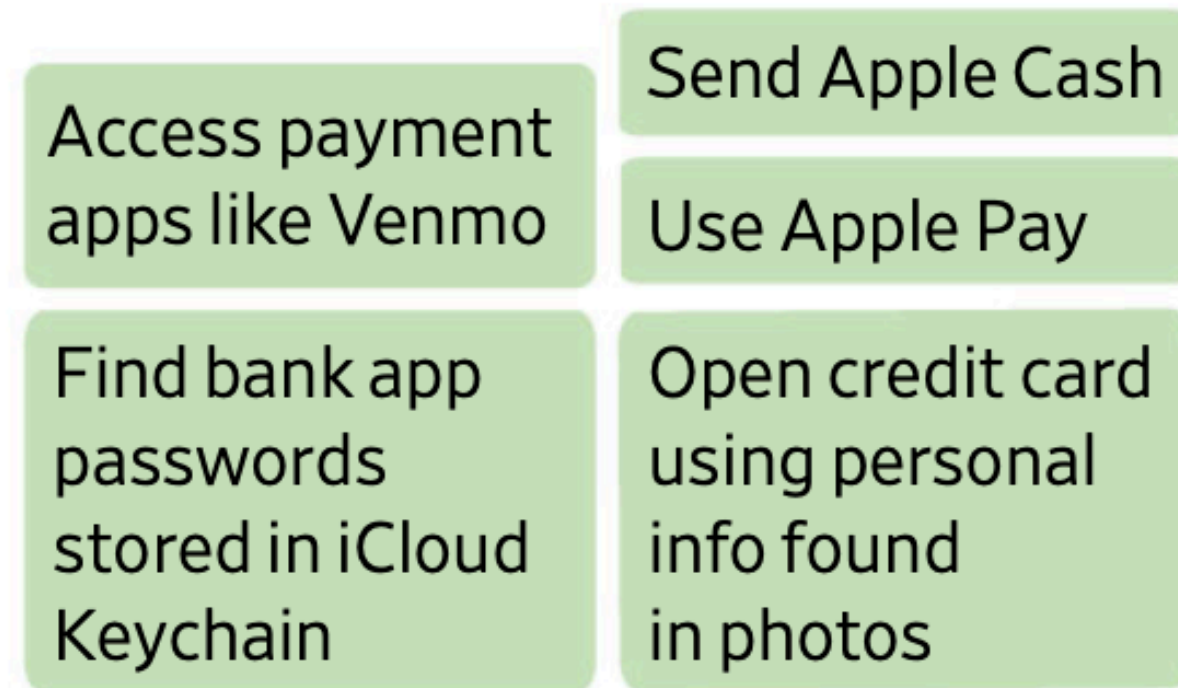

You can't remotely wipe your device to protect your data

Your Data

You are locked out of your Apple iCloud account

Your Money

Your financial accounts get looted

What this new security setting does

It buys you time, and locks down your iPhone

- Stolen Device Protection:
 - **Prevents** changing critical Apple ID & account information when your iPhone is away from familiar locations
 - **Alerts** you that changes are being attempted in an unfamiliar location
 - **Locks** your iPhone when it is sure it is in an unfamiliar location, preventing account changes
 - **Requires** biometric authentication with Face ID or Touch ID with no passcode fallback to make critical Apple ID or account changes
 - **Imposes** a Security Delay to conduct sensitive operations: a successful Face ID or Touch ID, *an hour wait*, then an additional successful biometric authentication.

Multiple rings of protection for your account

It puts time on your side...

- With Stolen Device Protection enabled:
 - A passcode alone will not grant access to passwords, using Wallet, accessing saved payment methods; Face ID or Touch ID would be required
 - To change any sensitive account information, the Security Delay will be imposed:
 - Face ID / Touch ID required first, then wait an hour, then another Face ID or Touch ID
 - Prevents the crook from using only a passcode to access these items

Multiple rings of protection for your account

It puts time on your side...

Cancel

Security Delay Required to Change Stolen Device Protection

A security delay is required because Stolen Device Protection is active and iPhone is not at a familiar location.

-  The security delay will last for 1 hour.
-  You will still be able to use your iPhone during this delay.

[Start Security Delay](#)

[Learn more](#)

Security Delay in Progress

You will get a notification when the security delay ends. You will then be able to turn off Stolen Device Protection.

Time Remaining 59:56

[Done](#)

[Learn more](#)

Should you turn it on?

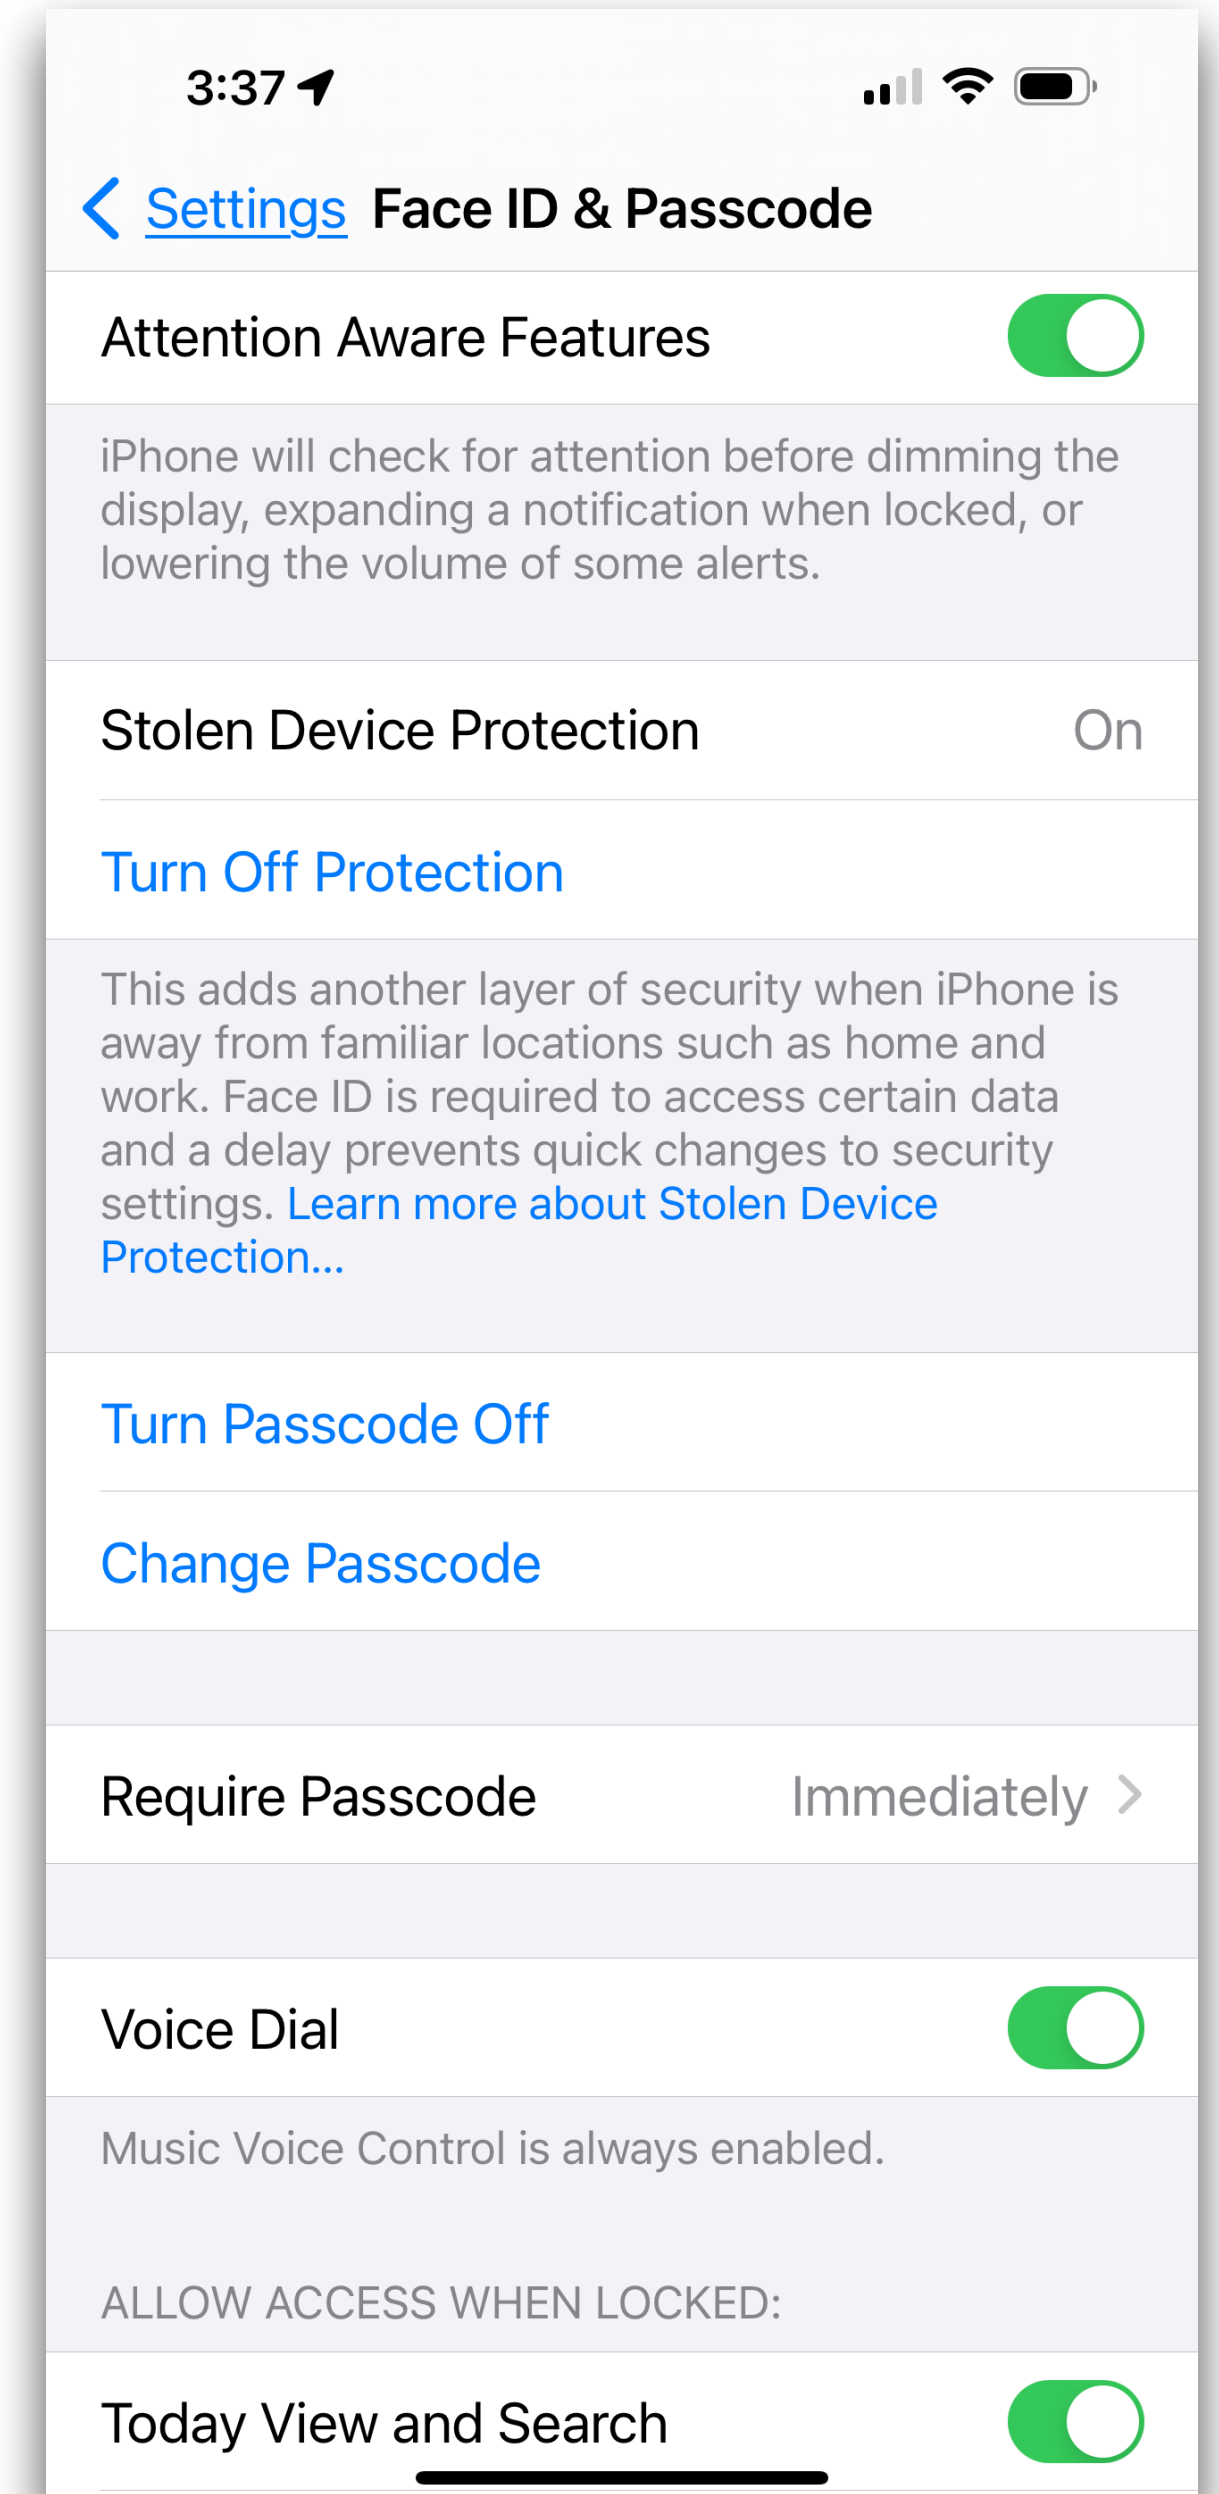

Unless you are unique little unicorn: YES.

- It is off by default — at least for now
- There are no downsides to turning it on
 - Only exception: If your Face ID scanner or Touch ID home button break, you won't be able to access any of the protected features until you're *back in a familiar location* **or** *fix the device*
- There are many good reasons to turn it on
- It only takes a minute to do it

How To

It's pretty easy...

- Settings → Face ID / Touch ID & Passcode → Enter passcode → Stolen Device Protection → On

All the freakish details

Use Stolen Device Protection for iPhone HOWTO

Cove Apple Club — February 7, 2024

If a bad guy gets control of your iPhone while it's unlocked (by grabbing it from you in public, or tricking you into unlocking it, then stealing it), you could wind up in a world of hurt. With your passcode and an unlocked iPhone, a bad guy could:

- Change your Apple ID passwords in iCloud Keychain
- Access your stored passwords in iCloud Keychain
- Turn off Find My for your stolen iPhone
- Enable an Account Recovery Key for your Apple ID, locking you out of your iCloud data forever
- ...and more.

Apple has released Stolen Device Protection in iOS 17.3, available now for all iPhones sold in the last 4-5 years. It is turned **off by default**, but you should definitely **turn it on**.

With Stolen Device Protection turned **on**, even if a bad guy **has your iPhone** and **knows your passcode**, with your iPhone in an unfamiliar location, Face ID or Touch ID will be required before they can take certain actions, including the following:

- Use passwords or passkeys saved in iCloud Keychain
- Use payment methods saved in Safari (autofill)
- Turn off Lost Mode
- Erase all content and settings
- Apply for a new Apple Card
- View Apple Card virtual card number
- Take certain Apple Cash and Savings actions in Wallet (for example, Apple Cash or Savings transfers)
- Use your iPhone to set up a new device (for example, Quick Start)

With Stolen Device Protection on, you may also be required to wait an hour before using your iPhone to make changes to critical security settings or your Apple ID. If your iPhone is not in a familiar location, you must authenticate with Face ID or Touch ID, wait for the security delay to end, then authenticate with Face ID or Touch ID again to update settings such as the following:

- Change your Apple ID password
- Sign out of your Apple ID
- Update Apple ID account security settings (such as adding or removing a trusted device, Recovery Key, or Recovery Contact)
- Add or remove Face ID or Touch ID
- Change your iPhone passcode
- Reset All Settings
- Turn off Find My
- Turn off Stolen Device Protection

To turn on Stolen Device Protection on or off:

1. Make sure your iPhone is running iOS 17.3 or later
2. Open Settings
3. Tap Face ID & Passcode or Touch ID & Passcode, depending on your iPhone model
4. Enter your passcode to proceed to the next screen
5. Scroll to Stolen Device Protection, then toggle it on or off

To learn more about Stolen Device Protection:

- Visit <https://support.apple.com/en-us/HT212510>

Upcoming meeting dates

All meetings begin at 7pm ET on Wednesday nights

- February 28
- March 13
- March 27
